EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee. Authorization for this examiner's amendment was given in a telephone interview with Steven F. Meyer on 05/10/07. The application has been amended as follows: The non-elected claims 11-13 for an election without traverse has been cancelled from further consideration. The following brief description for Fig. 4 and Fig. 5 have been included in continuation to brief description of Fig. 3 in page 7 by removing the adverb "and" in line 2 of brief description of Fig. 2 and changing period "." to semicolon ";" in line 2 of brief description of Fig. 3. Fig. 4 is a portion of flow chart that is modified from that of Fig. 3; and Fig. 5 is a portion of flow chart that is modified from that of Fig. 3.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: Claims 1 and 9 are allowable because the prior art of record fails to disclose or suggest or teach the recited an actuator for changing a set pressure differential in such a manner that force applied to the valve body is changed by an external command, the set pressure differential being a reference value of a motion for determining a position of the valve body by the pressure sensing mechanism; a detector for detecting cooling load information in the refrigerant circuit; a first calculator for calculating a target pressure in a relatively low

pressure region in the refrigerant circuit in response to the detected cooling load information; a suction pressure sensor for detecting actual pressure in the relatively low pressure region in the refrigerant circuit; and a compressor controller for controlling the actuator to eliminate a first differential between the calculated target pressure and the detected actual pressure (see claim 1); an actuator for changing a set pressure differential in such a manner that force applied to the valve body is changed by an external command, the set pressure differential being a reference value of a motion for determining a position of the valve body by the pressure sensing mechanism; a detector for detecting cooling load information in the refrigerant circuit; a first calculator for calculating target surface temperature on the evaporator in response to the detected cooling load information; a surface temperature sensor for detecting actual surface temperature on the evaporator; and a compressor controller for controlling the actuator to eliminate a first differential between the calculated target surface temperature and the detected actual surface temperature (see claim 9).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mohammad M. Ali whose telephone number is 571-272-4806. The examiner can normally be reached on maxiflex.
